Alfie Peacock, Project Support Officer

Hannah Smith Sustainability Project Manager.

With us today

Michel Thill Founding Director

Tish Vail Creative Director.

- We are from Social Landscapes
- Welcome to our workshop 'Concept Development' to reimaging the gardens & outdoor spaces surrounding Treadgold House

Agenda

- 1. Recap Social Landscapes
- 2. Learnings from previous meetings
- 3. Introducing design elements for each garden
 - North Facing Garden
- South Facing Garden
- West Facing Garden
- 4. What happens next?

Social Landscapes is a community interest company who work with both individuals & groups to re-imagine and re-design their green spaces to support personal, social and ecological wellbeing.

We believe that healthy neighbourhoods need vibrant places and that these places need engaged communities. By using a creative, permaculture and placemaking approach to what we do, we create urban environments where people and planet prosper.

"Human connection lies at the heart of human wellbeing!"

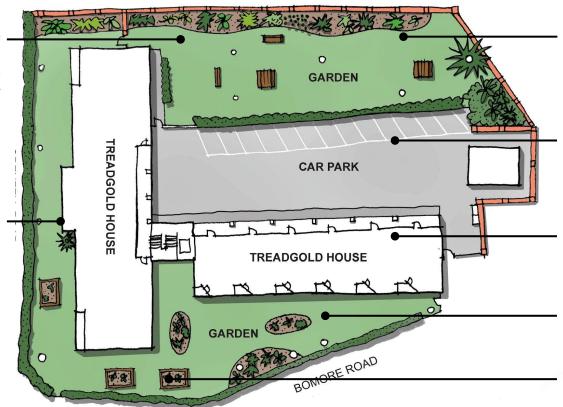

People Places

Livelihoods

Learnings from the first workshop 'Gathering Ideas'

Too much shade caused by trees. You said you would like to have more sunny areas with benches and tables for picnics and to hang out with your children.

You were cautious about pigeons due to having had problems in the past. Have had to cover balcony with netting.

You said you would like a play area for children somewhere safe away from the carpark.

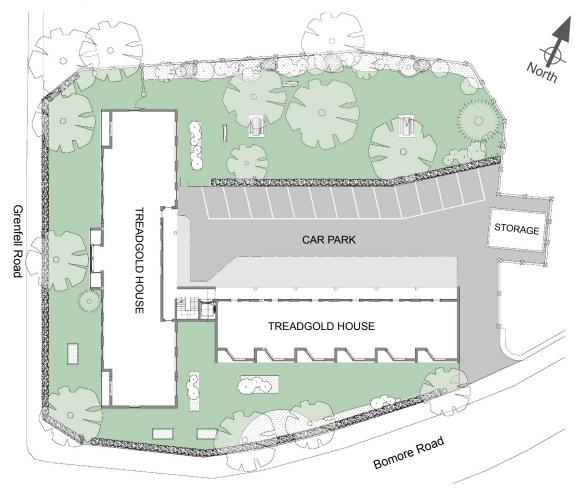

There were mixed feeling about the car park. Could 1 or two spaces be used for an outdoor gym or greenhouse.

A resident asked if there was an opportunity for a communal space - somewhere to hold functions & gatherings.

A general feeling that gardens are not inviting enough to visit and spend time in.

Existing planters not used and therefore are left looking unattractive.

Learnings from the second workshop 'Concept Development'

- To make the gardens more welcoming to residents, e.g. opening up more sunny seating and play areas, bringing in colour
- To make the gardens more accessible changing the way we can move through the space, e.g. levelling the ground or creating paths, having new entrance, taking away boundaries
- To make the gardens more functional - an extension of your home, e.g. including opportunities to use the balconies, growing and harvesting useful plants in the gardens and planters

Introducing Design Elements to the Gardens

The South Garden

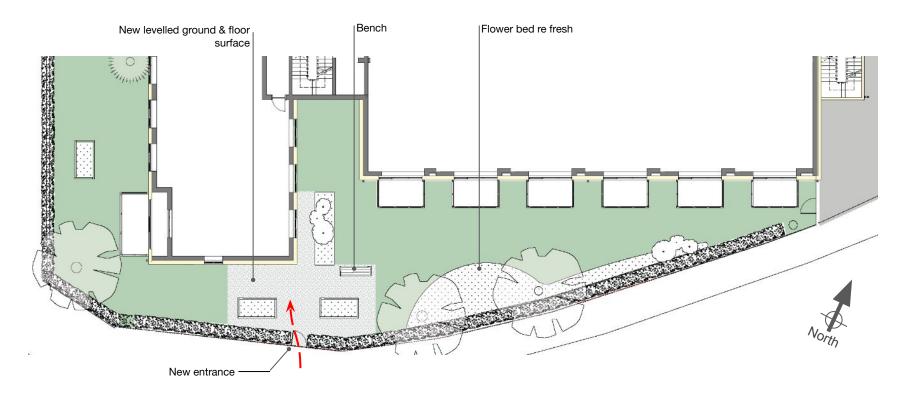

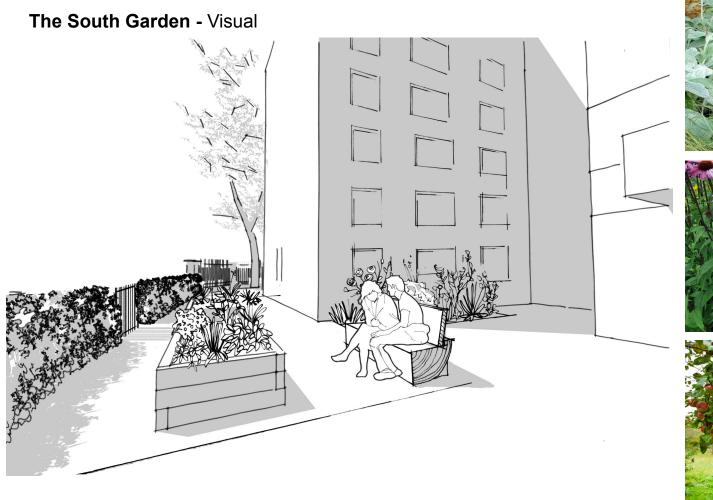

- How can we make the gardens more welcoming?
- How can we make the gardens more functional an extension of your home?
- How can we make the gardens more accessible changing the way we can move through the space?

The South Garden

This garden will get most sunlight so is best for growing flowering plants and edibles. The existing flower beds and raised beds could be refreshed with herbs and pollinators, visually pleasing to look at for residents who have balconies overlooking the space. We recommend that the trees are pruned, otherwise will cast too much shade and overhang the balconies. Or otherwise they could be replaced with 3 to 4 smaller fruit trees along the south border.

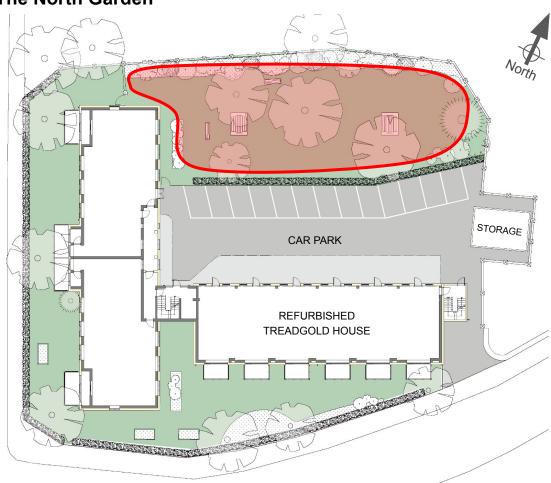

The North Garden

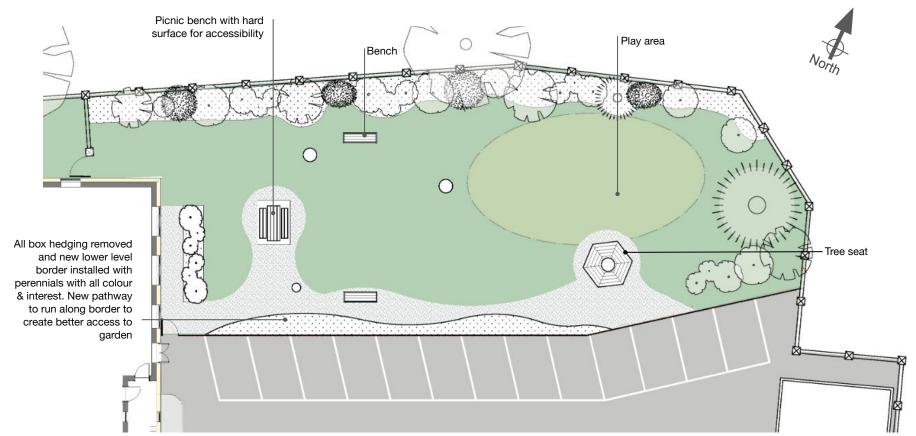

- How can we make the gardens more welcoming?
- How can we make the gardens more functional an extension of your home?
- How can we make the gardens more accessible changing the way we can move through the space?

The North Garden - Example 01

The North Garden will get plenty of sunlight if the trees are pruned and/or some trees are removed and possibly replaced with smaller trees.

The North Garden - Visual

The North Garden - Visual

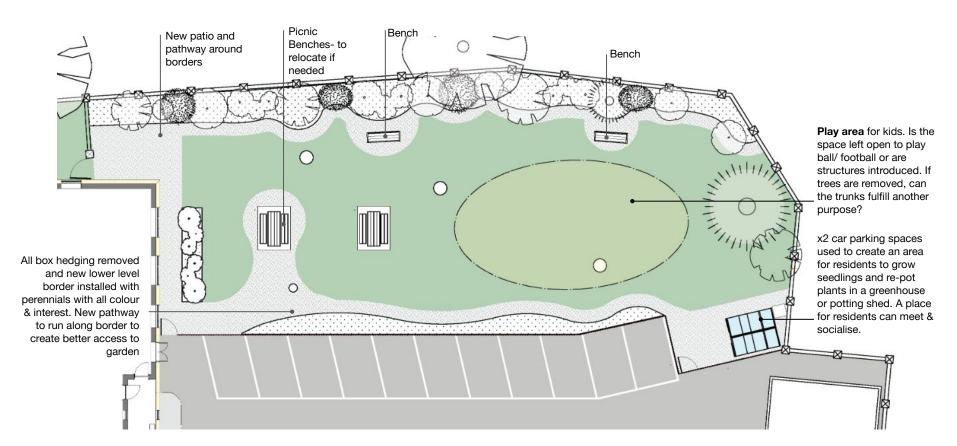

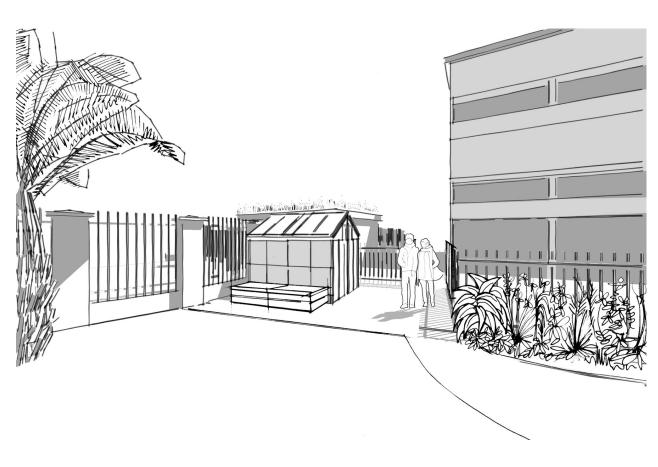

The North Garden - Example 02

The North Garden will get plenty of sunlight if the trees are pruned and/or some trees are removed and possibly replaced with smaller trees.

The North Garden - Visual

The West Garden

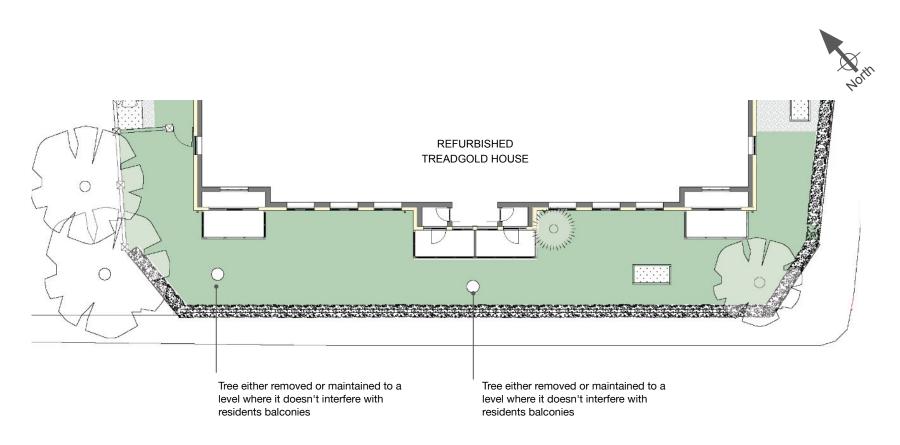

- How can we make the gardens more welcoming?
- How can we make the gardens more functional an extension of your home?
- How can we make the gardens more accessible changing the way we can move through the space?

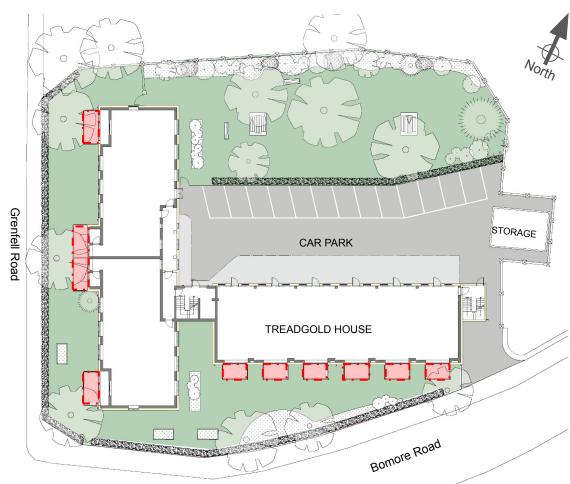

The West Garden

This garden will get afternoon and evening sun and is least accessible. We are suggesting for the trees to be pruned to give more light on the new balconies. The space could have some new planting if ground floor residents desire.

Balconies

- How can we make the gardens more welcoming?
- How can we make the gardens more functional an extension of your home?
- How can we make the gardens more accessible changing the way we can move through the space?

The Balconies

Residents to choose from a menu of options, including **hanging plant pots**, **planters**, **pigeon netting** which can also be used for **climbing plants** in combination with the planters to give shade and privacy, **bike hangers**, **bokashi compost** bins, to make compost from food scraps that can be used in the planters.

From all of us thank you! We really appreciate your time and participation
