"These books are the next steps in our work with architects and the Council to design the future of the Estate. This work will give us a major voice on the future of own our homes.

After the tragedy of last June, this is a fundamental step for residents to begin the process of rebuilding their lives.

Many of our residents attended the consultation events and we are clear on the need for positive change.

The LWRA is working to ensure that the Council lives up to its promises. We will continue to make sure they listen to residents to fulfil their promise to make this a model estate for the 21st Century.

Most importantly, we will secure our rights to improved living conditions and putting the ideas in these books into practice.

We will be approaching Central and Local Government to support us to achieve our aims and secure their support for the refurbishment of the estate."

Lancaster West Residents' Association

Introduction

Purpose of this Book of Ideas

This book provides a record of the resident participation and co-design events held between January and March 2018 for Lower Talbot Walk and Upper Talbot Walk.

This book:

- Records the ideas and concerns that emerged from the engagement with residents.
- Establishes a reference document for the next stage of the project when the ideas will be added to, developed in more detail, and thoroughly tested for feasibility of implementation, including cost and disruption implications.
- Records the process of resident engagement and feedback that took place.

At the next stage:

- Residents will be part of the process of selecting designers to take the refurbishment forward.
- Residents will make choices about these and additional ideas informed by factors such as cost, levels of disruption and current regulations.
- Residents will remain at the heart of the design and implementation process.

The building

The building was constructed in the 1970s and designed by Kensington and Chelsea's in-house architects as part of Phase 2 of the Lancaster West Estate development. There are 18 homes in the block and it is divided into 2 walks:

Lower Talbot Walk: Which features 6 four-bedroom homes with first floor deck access.

Upper Talbot Walk: Which features 12 three-bedroom homes with third floor deck access.

The building has 2 communal staircases, with external staircases, at either end of the building.

When the building was built there was car parking underneath the block, however this is now being used by a private storage facility (Safestore).

How we have consulted

We have carried out an extensive engagement programme. This has included Ideas day events, leafleting and door-knocking across the estate, block and cluster meetings, attendance at Residents' Association General Meetings, home visits where requested, and telephone and email correspondence.

The following resident engagement events have been held with residents from Lower Talbot Walk and Upper Talbot Walk to collect resident comments on the current conditions and discuss possible ideas for new refurbishment works:

- Resident Ideas Day, Kensington Leisure Centre, 27.01.2018
- Block meeting 1, St Clements, 07.02.2018
- Individual resident consultations
- Resident Ideas Day, Kensington Leisure Centre, 10.03.2018

Findings

The following sections summarise the findings and resident feedback received during the engagement process. A series of possible 'early projects' are also identified as work which could possibly be carried out before the main refurbishment works without affecting future plans.

Summary of findings

Lower Talbot Walk and Upper Talbot Walk

Your concerns:

After various discussions with residents, the following concerns were made about your homes, your block and the wider Lancaster West Estate.

- Management and repairs appear neglected.
- > Fire safety: including fire engine access to the block.
- Asbestos: residents have raised concerns regarding the presence of asbestos in the block.
- Accessibility is difficult with no lifts. Particularly a problem for elderly or disabled residents living in Upper Talbot Walk, or those with young children. Ramp access is possible to half of Lower Talbot currently.
- Safety and security: concerns that the doors in the communal areas are not secure. Anti-social behaviour in the central staircase and around the ramps.
- Leaks, damp and draughts: condensation on windows due to single glazing.
- Rubbish: small rubbish chutes, with no space for disposal of larger items or recycling.
- Bathrooms and kitchens in need of upgrading, poor ventilation to kitchens and bathrooms.
- Flooring badly maintained and creaking.
- Lack of play space for children.
- Confusing signage.

Ideas we discussed:

The following ideas were suggested by the consultant team or residents in response to issues raised by residents during the consultation events.

All these ideas require further investigation to examine feasibility and costs. They will be discussed with and reviewed by residents.

- Refurbish the communal areas.
- Create new, secure and clearly identifiable main entrances for each block: including lifts and enclosed staircases.
- Provide an insulated brick skin to the building.
- Provide external balconies to Upper Talbot Walk: incorporating existing balcony into the flat to provide additional living space.
- Provide new heating and ventilation system: utilising renewable energy.
- Better use of the basement space; options for nursery use.
- Remove existing ramps and fencing where possible to improve connectability across the Estate.
- Make the communal courtyard and gardens more accessible to residents.
- Providing front gardens to residents in Lower Talbot Walk.
- Options for reconfiguration of internal flat layouts, including options for open plan.

Immediate actions:

The following need to be taken forward as a priority:

- Audit and update the Fire Risk Assessment for all blocks, in both the short and long term.
- Implement an effective Repairs and Maintenance Strategy.
- Conduct a housing appraisal to establish whether people feel their homes respond to their current needs.
- Check for and deal with asbestos.

Early projects:

Works to your block or home

These are possible projects specific to your home or block that could start before the main refurbishment work begins.

- > Remove threshold upstand to front doors.
- Improve door security and ensure the doors in communal areas cannot be jammed open.
- Improve the play spaces for children.

Works across the estate

These are possible projects that apply to most homes, blocks and external spaces across the estate, and could start before the main refurbishment begins.

- Improve community safety through; additional and better street lighting, providing video door entry systems, and increased CCTV.
- Improve signage across the estate.
- Improvements to refuse areas, including providing space for recycling and disposal of larger items.
- Investigate interim home improvements in advance of full refurbishment, e.g. mechanical ventilation systems, heating, plumbing and water pressure.
- Introduce a local lettings policy to meet local needs.
- Provide secure bike storage, and improve play spaces.
- Make improvements to nursery facilities, and identify options for future location.
- Investigate and resolve pest control issues.

Suggested Pilot Schemes

- Various works in vacant flats could be undertaken for technical investigations and to create show homes for residents to view.
- Surveys (incl. structure, services, drains, water and sewage).

Concerns and ideas: In detail

Heating, ventilation and energy bills

The building was built in the early 1970s and is constructed as a combination of concrete frame with cavity brick walls and solid brick walls on the ends of blocks. The white horizontal stripes on the building are concrete structure exposed to the weather. This is bringing cold and moisture into homes, the technical name for which is cold bridging. Cold bridging can cause damp and mould and is made worse by poor ventilation. This is a typical issue of buildings constructed in this period and can be overcome through insulation, which can be seen on the next page.

Concerns include:

Condensation

Many residents have reported problems with condensation on the windows, particularly after showering or in the kitchen. This is linked to poor existing ventilation in the kitchens and bathrooms, and single glazing of windows.

Lancaster West Estate Refurbishment

Draughts and noise pollution

Draughts into flats have been highlighted by residents, particularly around the balcony doors. Residents can hear noises from the corridors, and the floor boards and stairs creaking in adjacent homes.

Heating control

Heating is controlled centrally. Residents would like more control over the heating of their flats. This is particularly important for the elderly or those with young children. Residents would like some certainty that their overall energy bills will not increase.

Water pressure

Water pressure is an issue that has been highlighted by many residents, particularly the shower pressure. Some residents have installed local water pumps to improve the pressure in their individual showers.

Recycling facilities

There are no recycling facilities in the block. Residents currently have to take recycling to the external bins adjacent to Talbot Grove, which is too far for residents to carry recycling. A dedicated space for recycling is required. The existing rubbish chutes are no longer suitable for purpose.

Early Ideas: New insulated brick skin

A new thermal skin could cover the exposed concrete slab and add a barrier between homes and the outside and improve the temperature and climate inside homes. The general consensus from residents seems to be they do not like the look of the existing buildings, and would like to see a different colour brick used or options for different materials explored. Some residents have suggested that a lighter brick would be preferable.

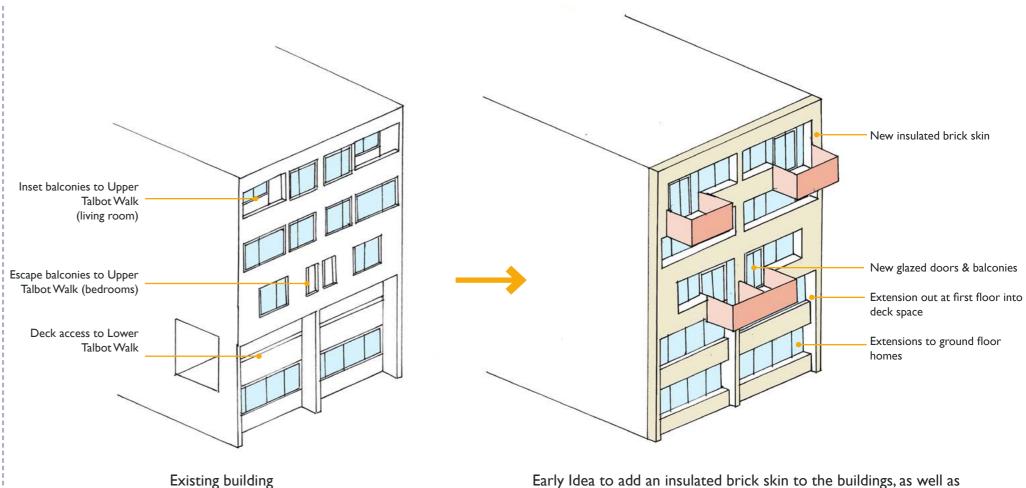

Early Ideas: Balconies to Upper Talbot Walk

The existing balconies from the living spaces are dark, and underused. If an insulated brick skin will be added to the building, then it makes sense to enclose these balconies, and make them part of the living space. The plans on the next few pages show how this would create a larger living space.

There are existing escape balconies from the bedrooms, which are not accessible at the moment. These could also become part of the bedroom space.

External balconies can be added to the building to replace the existing balcony spaces which are lost, creating a balcony both on the living room side and the bedroom side.

The residents we have spoken to were keen to keep the balconies covered if possible. In the next stage of design the options for the balcony design can be explored further if this is something the residents are in favour of, although it must be noted that adding a cover will reduce the amount of daylight into the home.

Example of adding a new insulated facade

Example of a balconies with a cover for solar shading

Example of timber balconies

Example of winter garden

Lower Talbot Walk & Upper Talbot Walk

Concerns and ideas: In detail

Lower Talbot Walk - Typical 4 bedroom home - Options for reconfiguring your home

The plans below show an option to reconfigure the homes in Lower Talbot Walk to provide front door access via front gardens, rather than via deck access. The space currently used by the deck could be incorporated into the homes to provide additional living space.

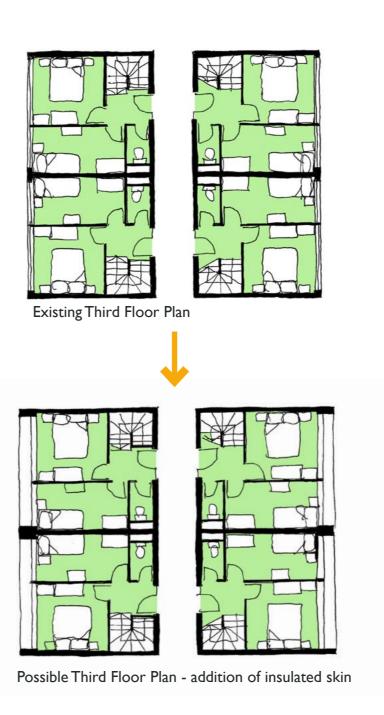

entrance from St Marks Road

Upper Talbot Walk - Typical 3 bedroom maisonettes - Options for reconfiguring your home

The plans below show an option to extend the 2 bedroom maisonettes on Upper Talbot Walk. If a new insulated brick skin is to added to the building, it makes sense to convert the existing inset balconies into extra space in the living room. An external projecting balcony could be added to the outside of the building, replacing the existing balcony with a larger space, enough for a table and chairs. Options could be explored to have this balcony covered or glazed.

Possible Fourth Floor Plan - addition of insulated skin, living space extended + external projecting balconies

Concerns and ideas: In detail

Communal areas

Corridors

There is a general consensus that the corridors need refurbishment. They were redecorated in the 1980s, and are outdated and unhomely. The lighting is institutional, and the lights are always on. The ceiling height is low, and further lowered by the central bulkhead containing the services running down the corridor.

Typical corridor view (taken from Upper Camelford)

Deck at Lower Talbot Walk

Lancaster West Estate Refurbishment

Step into flats

The steps into the flats are trip hazards and make access difficult for those with mobility issues, including the elderly and those with wheelchairs or pushchairs. Some residents have had the step removed already.

Rubbish chutes

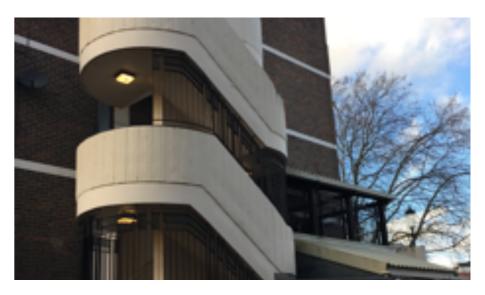

The rubbish chutes are small, and there is no dedicated space for recycling or larger item disposal. A dedicated space is needed for larger items so they are not left on the street outside the stairwell.

Stairs

The staircases are external, and residents have raised concerns that they become slippery when it is raining, and would rather they are enclosed.

Recycling

The current area for recycling is adjacent to Talbot Grove House. The bins are often full, and larger items are dumped here.

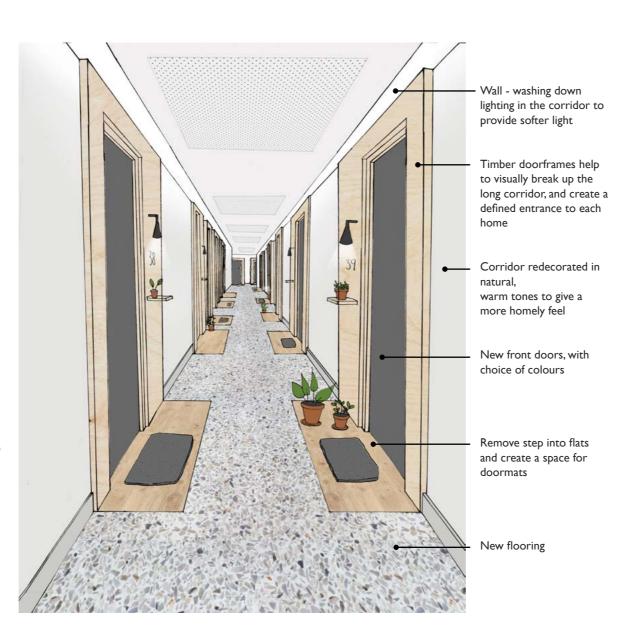

Early Ideas: Corridors in Upper Talbot Walk

The general consensus among residents is that the corridors are in need of refurbishment. At the moment the corridors and the staircases are open to the elements, and there are problems with water making the staircases and corridors slippery. We would suggest the corridors and staircases should become indoor spaces, and have a more homely feel. Through consultation with the residents we would suggest the following:

- Replace the lighting with softer wall-washing down lighting.
- Redecorating the corridor with muted, warm tones to give a more homely, light feel.
- New front doors, with a choice of colour for residents and no distinction between leaseholders and tenants.
- Remove the steps into flats, ensuring there is level access.
- New robust flooring material in the corridors (non-slip).
- Option for introducing timber door surrounds, with new numbering. Timber surrounds will help visually break up the long corridors, creating a defined entrance to each home.
- Investigate the services running along the corridor, and if possible increase ceiling height.

Examples of good design

Example of a light corridor with welcoming entrances

Example of timber front doors

Example of a corridor with feature down-lighting

Example of material palette

Terazzo floor & timber doors

Example of light enclosed staircase

Example of refurbished flat

Example of glass doors onto new balconies

Concerns and ideas: In detail

Outside the building

Ramps

Residents have told us they do not feel safe walking down the ramp, and this is an area where antisocial behaviour occurs. The ramp acts as a barrier to the communal gardens and playground in the centre of the estate.

Lancaster West Estate Refurbishment

Gardens accessibility

The gardens are maintained, but we have been told by residents they are not well used / not accessible. Some residents would like more usable green park space, but potentially only open to residents. Residents would like to keep the existing trees. If a tree needs to be removed as part of the refurbishment, a replacement tree must be provided.

Playground

Residents have told us the playground is not well used, and that they would like more play equipment. There are steps around the playground, making it hard to access with a pushchair. Residents have told us the playground is used more as a gathering space for young people in the evening, rather than for young children to play.

Cycling storage

The existing cycling storage is not secure and is not well used. We would suggest covered, secure cycle storage is included in the refurbishment.

Basketball Court

Residents have told us the basketball court is often locked, and needs to be reserved in advance to be used by members of the community. More spaces for young people are needed on the estate.

Basement

The basement was originally used for car parking, and is now occupied for Safestore, and contains storage units. Some residents have questioned if the storage could be for resident use.

Signage

Residents have told us the signage around the estate is confusing, and they have problems with visitors, deliveries and emergency services finding the correct entrances. (Typical signage shown below)

Intercom

The current intercom system does not have video screen display, and we have been informed by residents it is unreliable and easily tampered with. It needs to be replaced with a more robust and userfriendly system.

Trees and green spaces fences

The trees and green spaces are fenced in. One idea is to remove the fences and barriers to the green spaces. The blue colour to the fences in seen as institutional, so any new fences would be made to fit in more with the fences in the surrounding streets.

Concerns and ideas: In detail

Landscaping Option I

The sketch to the right shows an option for the future of the landscaping around Lower Talbot Walk and Upper Talbot Walk.

New front gardens could be provided along Talbot Walk (St Mark's Road), Camelford Walk and to the southern end of Lower Clarendon Walk (the north end already has front and back gardens). Adding front gardens would help to create a more traditional street feel to the pedestrian routes through the estate.

The gardens to the west of Talbot Walk (adjacent to Talbot Grove House) could either become back gardens for the properties on Lower Talbot Walk, or could become a communal garden for residents of Talbot Walk.

The route between Clarendon Road and St Mark's Road could be straightened, with the demolition of the existing ramp to access Clarendon Walk. This would allow views through from Clarendon Road and St Mark's Road, with the aim to increase safety and security for pedestrians along this route. This route would need to be sufficient width for emergency services access.

The alleyway between Lancaster Road and Clarendon Road (adjacent to Verity Close), could also be straightened, to improve views along the route and help improve security.

A central park and new play space could be provided adjacent to Talbot Grove, which would be for use by the community.

The Early Years Provision could take up more space within the basement of Clarendon Walk, having more of a street presence on Clarendon Road.

Possible landscape plan

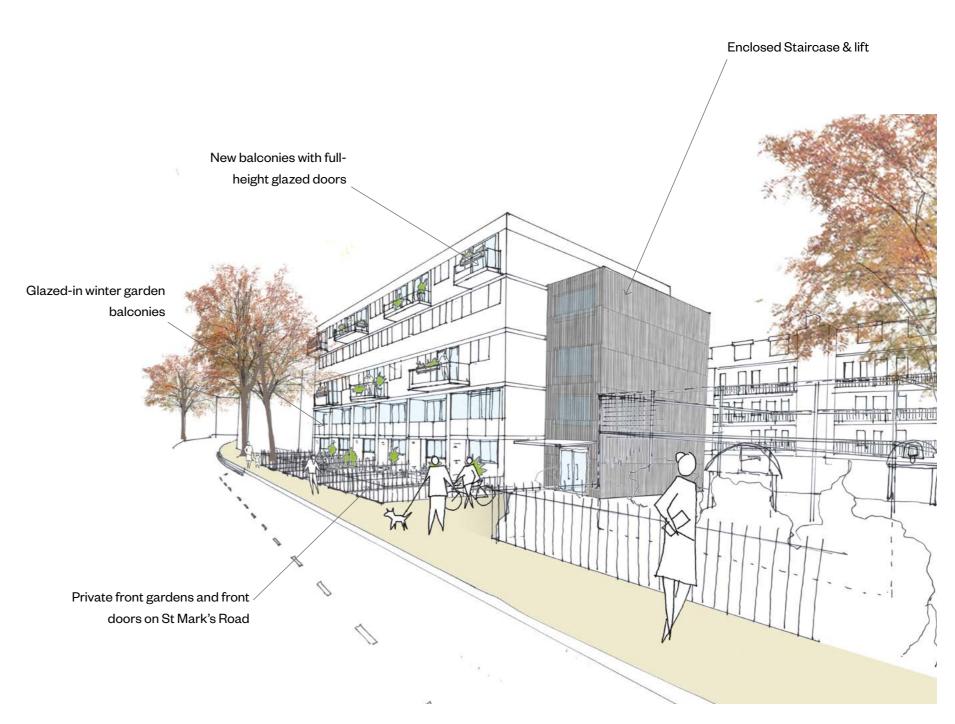

Early Ideas: Buildings & Landscape

The image to the right shows a concept of how the entrance to Clarendon Walk from Dulford Street could look following the refurbishment. The key design ideas are:

- Remove the ramps & provide new enclosed staircase & lifts
- Introduce new private front gardens and front doors to Lower Talbot Walk
- Straighten and widen pedestrian route through from Dulford Street to St Mark's Street (ensuring this is wide enough for emergency vehicle access)
- Utilise the basement of Clarendon Walk for community space, such as the Early Years Provision.
- Addition of external projecting balconies to the buildings (existing inset balconies become part of the living room).

View from St Marks Road

Concerns and ideas: In detail

Private front gardens and front doors changed to this side

Landscaping Option 2

The sketch to the right shows an alternative option for the future of the landscaping around Lower Talbot Walk and Upper Talbot Walk, which was developed following resident feedback in the block meetings and Ideas Days.

In this option the spaces between the blocks are made private and landscaped for primarily resident-only use. Gated entrances are shown from Lancaster Road, Clarendon Road and St Marks Road, these gates could have fob access. The gate from Clarendon Road would need to be wide enough for fire engine access to Camelford Walk and Clarendon Walk, with a straightened route through from St Marks Road to Clarendon Road. The central community gardens and improved playground would only be accessible for residents.

An alternative option (shown below) could be to keep the new route between Clarendon Walk & St Marks Road open to the public, but keep the community gardens and the space around Clarendon Walk gated, just for residents.

central community park Gated entrances to community gardens Straightened pedestrian route between Clarendon Walk & Verity Close PELVINI Talbot Grove Clarendon Walk Demolition of ramp, with gated access to courtyard and gardens for residents Private access only to Camelford Court Possible landscaping - Option 3 Ramped access to basement storage units / car parking

Improved play area and

Record of all resident comments received:

	Concerns:	Resident Comments:	Ideas:	Resident Feedback:	Possible early projects:
1.	Chronic neglect of management & repairs.	Residents agree maintenance is poor, and there is no response to repairs.	Implement an effective Repairs and Maintenance Strategy.	Residents would like urgent repairs to their homes prioritised. Residents have highlighted there has been a poor quality of workmanship for previous repairs.	✓
2.	Fire safety: including fire engine access to the block.	Concern over fire engine access. Would like better communication on the existing fire strategy.	Audit and re-affirm the Fire Safety Strategies for all blocks, in both the short and long term.	This must be a priority.	✓
3.	Difficult access, with no lifts.	This is a particular problem for older residents and those with young children.	Removing ramps and creating new ground floor entrances, with new enclosed stairs and lifts at each end of the block.	Residents support this idea.	
4.	Leaks, damp & draughts	Draughts between balcony and living spaces. Damp and mould inside the flats.	Adding insulation to the outside of the building (new insulated brick skin or similar).	Residents agree this would be a good solution, but have raised concerns as to the level of disruption to their lives during construction. Residents have expressed mixed views as to how the outside of the building should look. Some residents like the existing brickwork, while others would like a more radical change (they would like the building to be brighter / lighter).	
5.	Condensation on windows due to single glazing.	Problems with condensation and mould inside homes, concerns about the health risks.	Provide high performance double glazing, and provide more opening windows.	Residents support this idea, providing the windows do not get any smaller.	
6.	Rubbish: small rubbish chutes, with no space for disposal of larger items or recycling.	There is nowhere to recycle. Rubbish is left outside people's homes. The rubbish chute needs to be more secure.	Provide new spacious, organised, clean and secure areas for rubbish and recycling bins.	Supported by residents we met.	✓
7.	Individual flat bathrooms & kitchens in need of upgrading, poor ventilation to kitchens and bathrooms.	Upgrades that have already been completed have had poor workmanship. Residents would like a choice of fixtures and fittings (including leaseholders).	Provide options for refurbished kitchens and bathrooms. Introduce extract ventilation.	Supported by residents we met. Some residents suggested changing the internal flat layouts to move the kitchen adjacent to the windows.	

	Concerns:	Resident Comments:	Ideas:	Resident Feedback:	Possible early projects:
8.	Confusing signage	Hard for visitors and deliveries to find the correct entrances.	Provide new, improved signage across the Lancaster West Estate.	Supported by residents we met. There has been some work already completed by residents on signage design, and this needs to be considered.	✓
9.	Intercom	No video intercom, and intercom is often out of order as it is easily tampered with.	Provide new, robust intercom system, including video entry.	Supported by residents we met.	✓
10.	Asbestos	Residents have raised concerns regarding the presence of asbestos in the block.	Check for and deal with asbestos.	This is a priority for residents.	✓
11.	Antisocial behaviour in the staircases, and around the ramps adjacent to Clarendon Walk.	Some residents do not feel safe using the staircases, and do not feel safe walking around the ramp adjacent to Clarendon Walk at night.	Remove the ramp and existing staircases. Replace with new enclosed staircases with ground floor entry. Ensure there is visibility into the staircases to improve security.	Generally supported by residents we met. Some residents we met like the design of the external staircases and appreciate the architectural intent, so would rather they are kept as they are currently.	
12.	Lack of play space for children.	The existing play space has very little play equipment and is not well used. Older children / teenagers gather in the play space in the evenings.	Improved landscaping to the communal gardens to include improved play spaces for children with improved access & equipment.	Supported by residents we met. Could be a possible early project.	✓
13.	Water pressure	Difficult to have a shower. Bath is very slow to fill.	Water pressure to be improved. To be investigated as a possible early project.	Supported by residents we met. Some residents have already installed a local pump.	✓
14.	Heating control	Residents would like more control of their own heating.	Individual control via air-exhaust heat pump in each home.	Supported by residents we met, although there was some concern local control would result in increased bills.	
15.	Interior design of communal areas	Residents have told us they think the interior of the building is outdated, and would like to see the communal spaces redecorated.	Refurbishment of the internal communal spaces, to include: improved lighting, repainting, new flooring and new front doors.	Supported by residents we met. Residents do not like the existing tiles. Some residents suggested there could be a mural in the corridors.	
16.	Antisocial behaviour on the deck at Lower Talbot Walk	Residents have highlighted some cases of antisocial behaviour on the deck at Lower Talbot Walk.	Reconfigure the internal flat layouts of Lower Talbot Walk to create front doors directly accessible from St Mark's Road. Remove the deck access, and use the existing deck for additional internal space for the homes.	Supported by residents we met. Some residents were concerned as to the level of disruption this would cause.	

Record of all resident comments received:

	Concerns:	Resident Comments:	Ideas:	Resident Feedback:	Possible early projects:
17.	Poor access to communal gardens and railings around gardens	Residents would like access to the communal gardens. There is currently a noman's land between the pavement and the building on St Marks Road.	There is an option to have front gardens to Lower Talbot Walk with access directly off St Marks Road. Gardens on the other side of the building could either become communal gardens, or become back gardens for Lower Talbot Walk.	Generally residents we have met support the idea of front gardens off St Marks Road. Residents in Upper Talbot Walk would prefer the communal gardens to the west of the block to be kept communal, and be accessible only to residents. Some residents suggested the area between Talbot Walk, Camelford Walk and Camelford Walk should be gated, but there was mixed feedback on this idea. Residents would like the neighbourhood to have the same quality as nearby richer neighbourhoods in Notting Hill.	
18.	Not enough benching or areas for growing in the gardens.	There should be more benching provided in the gardens, and nice places to sit. There should be more areas for growing (plants, flowers and vegetables).	The garden should be re-landscaped to provide more benching, areas for growing and improved lighting.	Residents supported this idea.	
19.	No secure bicycle storage, or storage space within the home.	There is nowhere to store bicycles or larger items in the home such as push chairs.	There could be an option to include bicycle storage in the new building entrances.	Residents supported the idea of secure bicycle storage, they suggested this could also be in the basement.	
20.	There are not enough spaces for young people to hang out, or the community to come together.	There should be more spaces for young people (particularly 13-18 year olds). The existing basketball court is locked most of the time.	One option is to have a small community building in the communal garden, for example in the Talbot Grove garden. This could hold community facilities such as a youth club, or space for the residents association to meet / residents to rent out.	Most residents agreed a new community building should not be a priority in the refurbishment. Residents agreed the basketball court should be open for resident's use, but would like evening use controlled as it could become a noise disturbance.	
21.	The basement could be put to better use.	The basement is currently used as private storage (Safestore). Originally this was resident car parking.	This could be returned to car parking or could be storage for resident-use.	Residents currently have resident-permit street parking and are generally happy with this solution. Additional storage space would be preferred. This could also be used for bicycle storage / refuse.	

	Concerns:	Resident Comments:	Ideas:	Resident Feedback:	Possible early projects:
22.	Balconies are small, and generally not well-used.	Residents have problems with balconies leaking. Balconies are small and dark, and the space could be better used.	Extending the flats into the balcony spaces, and providing new individual projecting balconies for residents. Ensuring there are options for balconies to be covered for solar shading / rain protection.	Residents generally support the idea (provided leaseholders will not have to pay for the balconies).	
23.	Step into flats	The step is a trip hazard, and residents would like it removed.	Remove the step and replace the internal doors.	Residents generally support this idea. Some residents have already removed the step.	✓
24.	Corridor Doors	The corridor doors are on electromagnetic locks and be pushed open easily. They are also often jammed open.	Replacing the corridor doors with more secure doors and a more robust locking system.	Residents supported this idea, and would like this to be an early project, as they do not currently feel secure.	✓

Additional concerns

• **Disruption:** Residents are very concerned about the disruption that the refurbishment may cause to their lives. Some residents would therefore prefer options that involve the minimum amount of work to the buildings and homes.

Improvements to your neighbourhood

Wider neighbourhood ideas:

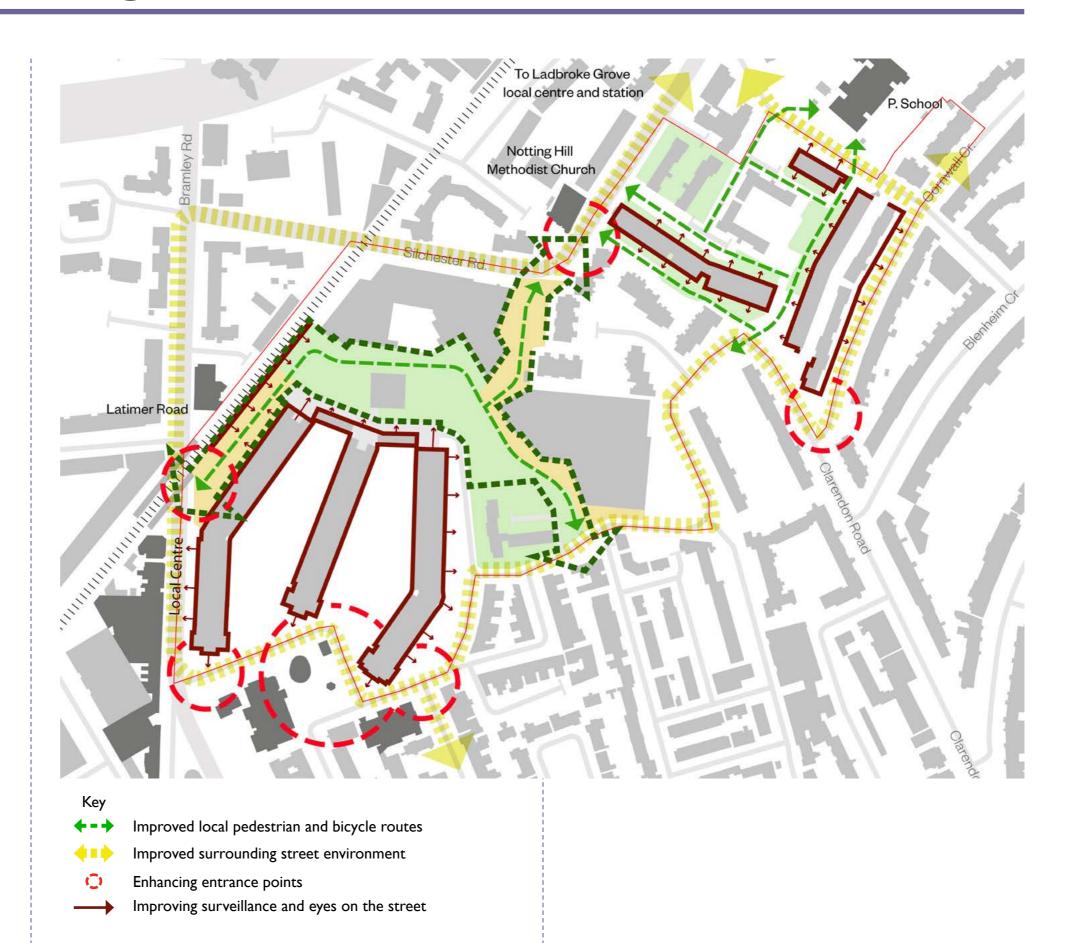

Key ideas, developed together with local residents, consider safety and security, the quality of open spaces and local streets, architectural identity and the provision of community spaces. As part of the refurbishment of the wider estate, the design and location(s) of nursery and other childcare provision for the estate would be reviewed with residents and service providers with a view to enhancing the current provision.

For more details please refer to the 'Wider Neighbourhood' book which details key concerns, key ideas and possible early projects.

Upper and Lower Talbot Walk:

Opportunity to improve the street scene and improve the feelings of safety along St. Mark's Road through creating identifiable main entrances, front gardens and front doors to Lower Talbot Walk.

The street connecting Dulford Street and St. Marks Road could include the removal of the access ramps currently at either end to increase safety and security for pedestrians along this route and emergency service access.

Landscape ideas:

Key ideas developed together with local residents consider trees and greenspaces, pedestrian routes, fronts and back gardens, courtyards, playspace and local streets. Outdoor spaces for residents to meet and gather were seen as positive improvements with an emphasis on high quality accessible spaces for practical use.

For more details please refer to the 'Wider Neighbourhood' book which details key concerns, key ideas and possible early projects.

Upper and Lower Talbot Walk:

Ideas include improving the quality of open spaces to ensure better pedestrian use and reducing dominance of cars. Solutions should consider low maintenance approaches with new bicycle storage and areas for shared community use. The creation of front and back gardens to provide amenity space for ground floor homes is suggested, giving further over-looking key footpaths used by local people. The existing play space to the west of the building should be reviewed to improve the value of the play provision whilst seeking to design out excessive noise and anti-social behaviour. Designs should seek to lift the general appearance of outdoor spaces across this part of the estate.

Key

- (I) Walkway courtyards
- 2 Whitchurch Road

- 9 Treadgold House

Energy and sustainability

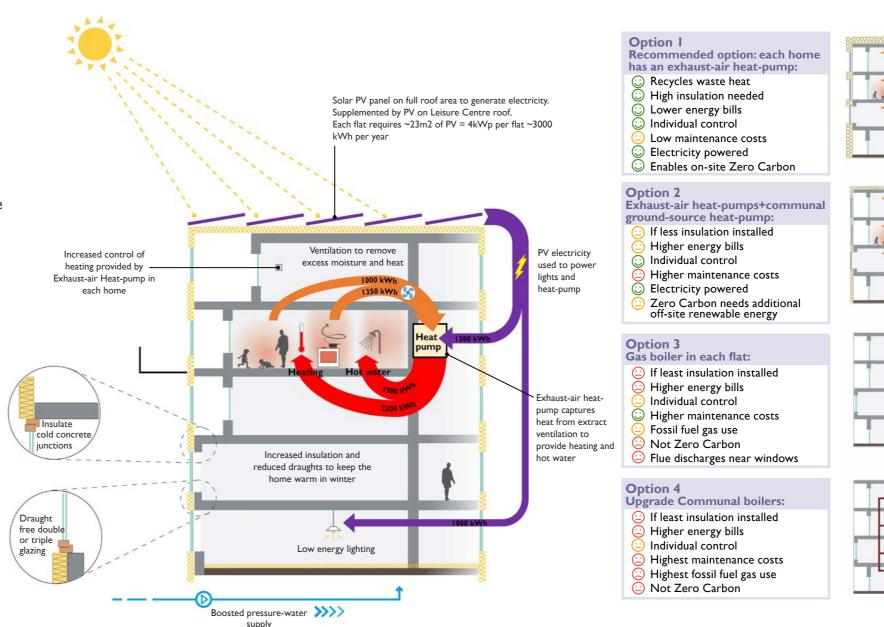

Residents' concerns include condensation, water leaks, draughts, lack of heating system control, insufficient water pressure, summer overheating, energy bills, as well as rodent infestation along pipe routes, exposed gas pipe concerns and poor-quality services installations.

In response, and to make these homes fit for the next thirty years, the proposed idea is to take the opportunity offered by improving the building envelope, to substantially improve the indoor environment and replace many of the aging water and energy systems. New high-performance windows, draught proofing, thermal insulation and waterproofing, together with a choice of external brick or other finishes and solar PV renewable energy generating roofs are proposed. This approach draws on best practice retrofit from around the world, particularly the Dutch 'Energiesprong' where they aim to upgrade each home in a matter of days, with the focus on achieving whole life cost neutrality.

In heating system terms, this offers the opportunity to recycle the waste heat given off by residents, appliances and cooking within each home using individual exhaust-air heat-pumps to deliver both heat and pressurised hot water, as per Danish best practice (see Option 1). By additionally using renewable PV electricity from the roofs, the homes could become zero carbon. Total individual control would be provided, and would avoid the need for fossil fuel gas-fired boilers and distribution pipework. This system removes the indoor generated moisture which otherwise has created condensation issues on the estate when new windows have been installed. In summer the proposed exhaust-air heat-pumps would also cool the ventilation as it creates hot water.

Suitable for:

- Treadgold House
- Camborne Mews 13-36
- Clarendon Walk
- Camelford Court
- Camelford Walk
- The Walkways
- Talbot Walk

Heating System

The type of suitable heating system is dependent on the level of thermal insulation. Higher levels of insulation and better glazing mean that waste heat from residents, appliances and cooking could become a sufficient heat source to meet the home space heating and hot water needs, reducing energy needs and residents' bills as shown in Option I (above, top right).

If insulation levels are lower, or parts of the building envelope are not insulated, then extra heating would be needed. This could come from

a communal ground-source heat-pump as per Option 2. If this extra needed heat is relatively small, then the community heat-pump would only need to run during peak winter.

Where the insulation levels are lower, for example if windows are double glazed only, then significantly more energy needs to be delivered. This would normally be provided by fossil fuel gas, either to serve individual gas boilers in each home (as Option 3), or for renewal of the community heating system (Option 4).

Community energy ideas

Buildings become 'Power Stations'

The largest urban renewable energy resource is our roof area. It is ideal for mounting PV solar electric panels, even for roofs that do not face directly south or have a slope. As PV panels can be a significant money earner during their life, current best practice is to set up Community Energy Co's so the local community can directly benefit from this. The new London Plan puts particular emphasis on this approach and there are now grants and financial support for setting up Community Energy Co's.

For the Lancaster West Estate we would aim to significantly upgrade the building envelope and replace the heating and water systems. This would create an opportunity to reduce home energy demand sufficiently to allow each home to be powered by roof PV and hence tap into this financial benefit.

The Community Energy Co. could potentially also mount PV panels across most of the currently unused large roof area of the Leisure Centre to supplement the estate buildings that fall short of the sufficient roof area needed to deliver enough PV power for their homes.

External insulation and prefabricated building elements

Prefabricated elements to reduce disruption and improve performance

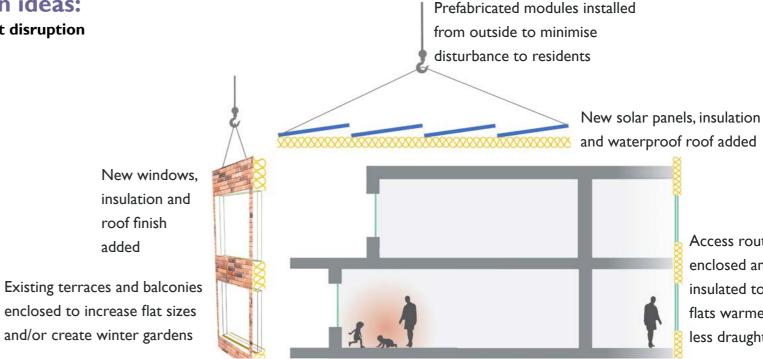

Solar panels

Construction ideas:

Reducing occupant disruption

roof finish

added

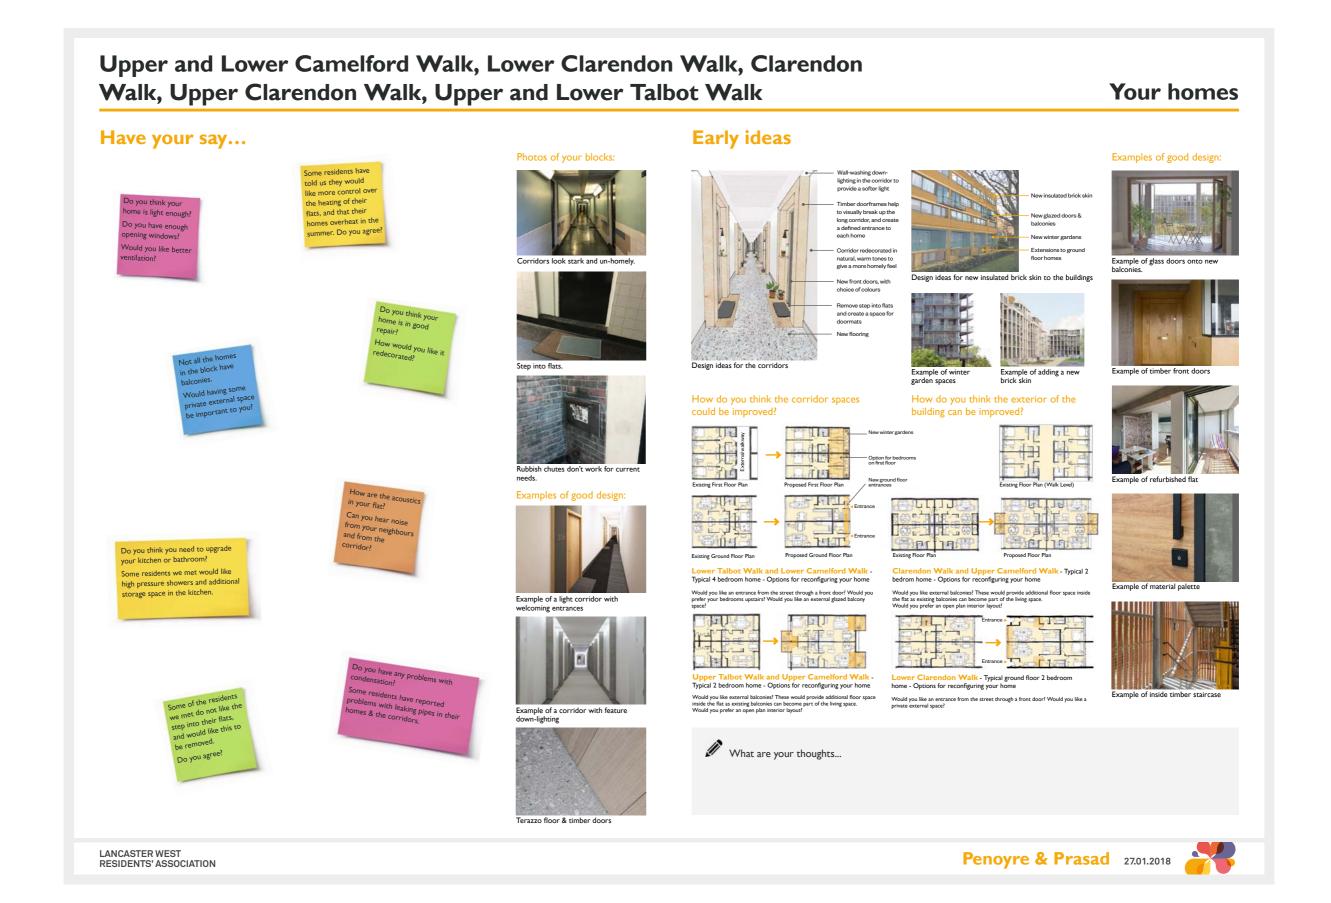

Access routes enclosed and insulated to make flats warmer and less draughty

Appendix

Engagement boards: Your homes

Example comments from residents: Your homes

Good transport, all services. Good location,
Close to work place,
local schools. Lots of community groups in the area.

Windows in bedroom draughty, very cold.
Lots of condensation.
Hinges are broken and the wood is rotten.

Shower doesn't work trickle of water. Pipes get clogged.

- Would like more secure front doors.
- Talbot Walk feels they miss out, isolated from the rest of the estate.

Re-wiring 10 years ago but proper job will need doing again.

An emergency button has been installed at the exit. No-one explained how to use it.

Needs a new kitchen & bathroom.

Sink upstairs has been leaking for a year now. It has been repaired but is still dripping.

Door entry system
doesn't work. Have to
open doors themselves.
Sometimes get stuck couldn't get in or out.
Need cameras (CCTV)
Better security needed.

Heating regulator is hidden under the floor boards and is inaccessible.

- Would like the boiler removed from the bedroom.
- Tiles need replacing between 7+9 upper Talbot (broken).

- Intercom doesn't work efficiently.
 Signage is poor and delivery people always have problems.
- The stair cases are really slippery when wet. Want a general upgrade of the area.

Engagement boards: Your buildings

Upper and Lower Camelford Walk, Lower Clarendon Walk, Clarendon Your buildings Walk, Upper Clarendon Walk, Upper and Lower Talbot Walk Give us your opinion... **Early ideas** Photos of your blocks: Do you think access to the gardens onfusing and it is ha for visitors to find the Proposed design ideas Well defined, straight & green pedestrian routes through the estate. Private front gardens and front doors New clearly defined entrance building with internal stairs & lift. Private front gardens and front doors for ground floor homes. View from St. Marks Road We were told by some residents the existing playgrounds are not well used, and the estate needs more places for young people. Do you think there is enough play Clarendon Walk & Camelford Walk Proposed design ideas Removal of ramps & community use nursery). Private front gardens and front doors for ground floor homes. View from Dulford Street What are your thoughts... LANCASTER WEST RESIDENTS' ASSOCIATION Penoyre & Prasad 27.01.2018

Example comments from residents: Your buildings

Facilities for young people. Young can be channeled in a better way.

We have a small communal garden but no has access to it. It could be made into gardens for Talbot Walk.

Recycling needs to be better managed with clearer information to residents about the recycling points.

Very dark under the blocks. Need improved lighting.

- Need secure bicycle storage on the estate.
- Neighbours are friendly, I like the community.

Play spaces are inadequate. They need to be more friendly, fun and welcoming with more equipment.

The area between
Upper Talbot and
Camelford Walk is
very dark and feels
unsafe. CCTV would
be useful.

Local facilities were given to leisure centre & young people cannot attend.

Signage is poor and delivery people always have problems

Need improved security - many criminals drug dealing.

Need improved lighting - flashing light.

Engagement boards: Promise to residents and FAQs

Promise to residents

Refurbishing Lancaster West

The council has promised to refurbish our estate. The promise is to do this "sensitively", collaboratively" and to create a "model for social housing in the 21st century". The council have set out 10 principles describing what this programme aims to achieve and how the council will work with residents, they are:

- The refurbishment will be resident led
- All refurbishment work will be done sensitively and in co-operation with residents
- There will be no demolition work of people's homes on the Lancaster West Estate
- We will create a model estate where the community can be proud to live and that the council can be proud to own
- We will make sure residents can make real choices on the refurbishment
- We will listen to all age groups and communities on what improvements they want to see
- The refurbishment will aim to provide local jobs and skills training for local people
- The refurbishment will improve local services so they are of a high quality
- The refurbishment will create a sustainable estate that can be maintained to a high standard
- There will be transparent decision-making and feedback provided by the council at each step

Reassurances

The improvements to the Lancaster West Estate will be designed to last for the foreseeable future. Residents will be consulted on any future work after the delivery of the programme.

The refurbishments will not result in rents rising above the going housing rates payable in the rest of the borough.

We aim to make your home safe, comfortable and warm. Where we can do this through the reduction of gas and electricity use we will pass on the savings in service charges directly to residents.

Grenfell Site

Work continues on the Grenfell Site. It is conducted by the independent Grenfell Site team, who provide updates to the Council and community. It is estimated that the Tower will be fully wrapped in June. The police expect the site to remain a crime scene until the summer, as they complete their thorough investigation within the Tower.

The bereaved, survivors and the wider community will be at the heart of the decision making regarding the future of the site, working in accordance with a set of principles that they have agreed with the Council and the Ministry of Housing, Community and Local Government (MHCLG). These principles were published on 1st March.

Frequently Asked Questions

Questions and answers about the Lancaster West Co-design Process

What is today's event about?

The 'Lancaster West Ideas Day' is part of a series of activities that will develop a refurbishment plan for the estate. The meeting is co-organised by the Lancaster West Residents' Association and the Council. Today features top architects who will listen to residents and use their ideas to generate plans for the estate. The plans will be co-designed by residents, this means the council and residents will work together to produce designs for the new estate and refurbishment works

Who is organising today?

This co-design process is resident-led and supported by the council. NewmanFrancis and Fluid are independent advisers working for the residents, they are also helping to arrange it.

I cannot stay long today - how can I provide ideas?

There will be a website set up to capture people's ideas at www.lancwestrefurb.com. Alternatively, if you prefer please email the Lancaster West estate neighbourhood director steve. jacobs@rbkc.gov.uk or drop by the Estate Office at Unit 2, Baseline Studios, Whitchurch Road.

Who can take part? Who is the refurbishment for?

Residents from Hurstway Walk, Testerton Walk, Barandon Walk, Treadgold House, Verity Close, Camelford Walk, Upper Camelford Walk, Clarendon Walk, Upper Clarendon Walk,

Lower Clarendon Walk, Talbot Walk, Upper Talbot Walk, Camelford Court, Talbot Grove House, Morland House, Camborne Mews and from Grenfell Tower & Grenfell Walk can all take part.

What about my current repair issue

The Council's neighbourhood team are happy to help. Representatives are attending today. You can also reach them at the Estate Office, at Unit 2, Baseline Studios, Whitchurch Road. If you prefer to call them, please call 07710053437 or 07710053431. Their office opening hours are currently Monday – Friday 9am to 5pm.

Is Bramley House part of this process?

The council are currently talking to Bramley House residents on their own refurbishment process.

What is the aim of the process?

Following the Grenfell Tower tragedy, there was clear recognition of the need to make real improvements around the estate. With that in mind, both local and central Government have committed funding to support an ambitious and resident-led refurbishment of the estate. The council has said that it aims to create a model estate for the 21st Century and that this work will be carried out collaboratively and sensitively.

Will there be any demolition?

There will be no demolition work of people's homes on the Lancaster West Estate.

What happens after today?

At the end of this stage of the consultation process each block will have an Ideas Book of design ideas, resident feedback and proposals for early projects. In stage 2 of the refurbishment programme, residents will work with staff to select block and estate architects. Once selected architects will work with block or cluster groups and the proposed Resident Steering Group to develop viable, detailed and costed proposals.

Will leaseholders be expected to pay for this

Leaseholders will not be expected to pay for improvement work to the common parts of the estate. At this early stage of the co-design work we are still determining what works residents would like to see on the Lancaster West Estate.

This co-design process involves all residents on the estate. The council is already listening to the concerns of leaseholders and the council will keep them informed as this work progresses.

Who made the decision regarding appointing the consultants involved in the process?

The Ministry of Housing, Communities and Local Government (MHCLG) identified a range of architects based on their relevant skills and experience. The Residents' Association agreed the architects and added others with local knowledge. The selection was done this way to ensure that the process could get underway quickly with the right specialist support. Residents will be involved in the selection of consultants for future stages of the refurbishment.
